Nepal Flag **Crimson Red #DC143C**
Navy Blue #003893

Figma
Single File

1. Designer Work Split

Each designer owns a screen on both platforms — web (1440px) and mobile (390px).

PRAPTI <i>Dashboards · GIS · Approvals · Reports</i> • Authentication (login, forgot, reset) • Central & Province dashboards • Citizen profile + approval diff • GIS map system + heatmaps • Reports & analytics • Web prototype (Day 7)	SHRENIKA <i>Forms · Offline · ID Card · Grievance</i> • PIN/biometric/OTP screens • Local body & Ward dashboards • Registration steps 6–10 • Family tree + ID card lifecycle • Offline sync + grievance system • Mobile prototype (Day 7)
---	--

Day	Focus	Prapti	Shrenika
1	Foundation	Study refs, set up tokens, build shared components	Study refs, set up tokens, build shared components
2	Auth + Shell	Login, forgot/reset, dashboard shell (web + mobile)	PIN, biometric, OTP, mobile bottom nav shell
3	Dashboards	Central + Province dashboards (web + mobile)	Local body + Ward dashboards (web + mobile)
4	Registration	Steps 1–5 — consent, personal, NID, family, household	Steps 6–10 — disability, education, photo, GPS, review
5	Profile + Modules	Citizen profile, approval diff, timeline, documents	Family tree, ID card lifecycle, employment, disability
6	GIS + Sync	GIS map, heatmaps, risk zones, coverage gaps	Offline sync, conflict, grievance system, QR scanner
7	Handoff	Reports, web prototype, CSS export, annotations	Error states, mobile prototype, Flutter asset export

2. Daily Design Tasks

DAY

1

Study + Foundation

Study reference designs. Set up Figma. Build all shared tokens and components.

UI REFERENCE

What to study

Open the reference designs and go through every screen. Note sidebar width, navbar height, card padding, button sizes, typography scale, and how Navy vs Crimson is used. Screenshot and save to the 01-Design-System page.

Color variables

Define all 9 color tokens in Figma Variables panel before touching any component. color/primary/navy (#003893), color/primary/crimson (#DC143C), neutral/white, neutral/page, neutral/border, text/body, text/muted, success, warning.

Typography styles

Create 6 Text Styles: heading-xl (32px bold), heading-lg (24px semi-bold), heading-md (20px semi-bold), body-lg (16px regular), body-sm (13px regular), mono (14px medium). Apply Navy color to heading styles.

Components to build

Build in this order: btn/primary, btn/secondary, btn/danger → input/text → badge/status → card/kpi → nav/sidebar → nav/bottom-bar → modal/base → table/base. Each must have Variants for states. Publish all to team library before Day 2.

Figma file setup

Create file 'Digital_Nepal_Ecosystem' with 15 pages: 01-Design-System, 02-Web-Auth, 03-Web-Dashboards, 04-Web-Registration, 05-Web-Profile, 06-Web-GIS, 07-Web-Reports, 08-Web-Grievance, 09-Mobile-Auth, 10-Mobile-Registration, 11-Mobile-Profile, 12-Mobile-Sync-GIS, 13-Mobile-ID-QR, 14-Prototypes, 15-Assets.

✓	File created, 15 pages set up, shared with full team
✓	All color + typography Variables defined
✓	10 base components built with Variants, published to library

DAY

2

Authentication

Goal: Login works on web and mobile. Dev team starts auth API.

UI REFERENCE

Login page (web 1440px)

Left panel (40%) — Crimson background, white Nepal emblem + tagline 'Digital Nepal — नागरिक सेवा'. Right panel (60%) — white bg, centered card max 480px: heading-xl 'Sign In', email input, password input + show/hide toggle, 'Remember me' checkbox, btn/primary Navy full-width, 'Forgot password?' Crimson text link. Error state: Crimson input border + inline error text body-sm.

Dashboard shell (web)

Sidebar 240px Navy bg — logo 64px top, nav items 48px height (icon + label), active item has 4px Crimson left border. Top navbar 64px white — breadcrumb left, search bar 320px + notification bell (Crimson badge) + avatar dropdown right. Canvas background #F5F6F8.

Login page (mobile 390px)

Stacked layout. Full-width Crimson header 120px with white logo. White body below. Login card full-width 16px horizontal padding. Same inputs and buttons, mobile sizing. No split panel.

PIN / Biometric / OTP (Shrenika)

PIN: 6 separate 48px square input boxes side by side, numeric keypad below, Navy active box border. Biometric: large fingerprint icon centered (Navy), 'Place finger to unlock' body-lg. OTP: 6 boxes same as PIN, 'Resend in 00:45' timer Crimson below. Offline login: Crimson banner 'Working Offline — using cached credentials' pinned at top.

PRAPTI

SHRENIKA

Login page [web + mobile]

PIN unlock — 6 separate boxes + keypad [web + mobile]

PRAPTI	SHRENIKA
Forgot password [web + mobile]	Biometric login screen [web + mobile]
Reset password [web + mobile]	MFA / OTP — 6 boxes + resend timer [web + mobile]
Session expired modal [web + mobile]	Offline login state banner [mobile]
Unauthorized / 403 screen [web]	Session expired overlay [mobile]
Account locked screen [web]	Bottom nav bar — 5 tabs [mobile]
Dashboard sidebar (expanded + collapsed) [web]	Offline mode banner (Crimson strip) [mobile]
Top navbar + notification + avatar [web]	

⚠ Common Mistakes

- PIN/OTP = 6 individual boxes, NOT one text field
- Sidebar collapsed state must be a Variant (64px, icons only) — not a separate frame
- Offline banner = component with 3 Variants: hidden / warning / critical

✓	6 web auth screens at 1440px + 768px
✓	5 mobile auth screens at 390px
✓	Dashboard shell components ready for Day 3

DAY

3

Dashboards

Goal: All 4 dashboards on web and mobile. Next.js team starts layout code.

UI REFERENCE

Central dashboard KPI row

4 cards in a row. Each card: white bg, 8px radius, 1px border, shadow. 24px icon top-left (Navy). Large number heading-xl Navy. Label body-sm below. Trend arrow: green up / Crimson down. Height 120px. Cards: Total Citizens, Registrations Today, Pending Approvals, Sync Errors.

Central dashboard charts	2/3 width — bar chart (monthly registrations), bars Navy, current month Crimson. 1/3 width — donut chart (demographic split). Both white cards, heading-md titles, body-sm legend. Below: activity feed (avatar + action + timestamp, 48px rows) + alert panel (Crimson=critical, amber=warning, Navy=info badges).
Ward dashboard	Header: ward name heading-lg + district + last sync timestamp. Quick actions: btn/primary 'Register Citizen', btn/secondary 'View Queue', btn/danger 'Force Sync'. Stats: 3 KPI cards (Registrations today, Pending Sync — amber if >0, Offline Records — Crimson if >0). Full-width citizen search bar 48px, Crimson icon right. Activity table below: Name NID Time Action Status. Status badges use badge/status component.
Mobile dashboards	Stack all vertically. KPI cards go 2x2 grid. Charts become single full-width bar chart. Alert panel removed — show as notification badge on nav. Ward dashboard: header + 3 KPI cards + search bar + table, all single column. Dashboards look different per level — do not copy-paste.

PRAPTI	SHRENIKA
Central dashboard — KPI cards + charts [web + mobile]	Local body dashboard — approval queue + sync alerts [web + mobile]
Central dashboard — activity feed + alerts [web + mobile]	Local body — ID card requests + infrastructure gap [web + mobile]
Province dashboard — municipality cards + charts [web + mobile]	Ward dashboard — search + quick actions + table [web + mobile]
KPI card + chart placeholder components [web + mobile]	Status badge + approval queue widget [web + mobile]

⚠ Common Mistakes

- Charts are placeholder frames on Day 3 — colored rectangle + icon, not real chart code
- KPI cards must use Auto Layout — never manually stretch

- Do NOT design a mobile sidebar — mobile uses bottom nav from Day 2 only

✓ 4 dashboards — each at 1440px + 390px = 8 frames minimum

✓ KPI card and status badge published to team library

DAY

4

Citizen Registration

Goal: Full 10-step form on web and mobile. Flutter team starts mobile core.

UI REFERENCE

Step indicator

Full-width strip. 10 numbered circles + connecting line. Completed: Navy filled circle. Current: Crimson filled. Upcoming: gray outline. Progress line fills Navy. Step labels body-sm below. On mobile: collapses to 'Step 4 of 10 — Employment' text + thin Crimson progress bar full width.

Form layout (web)

Left sidebar 300px Navy — current step name heading-md white, auto-save indicator + 'Save & Exit' btn. Main area white card 24px padding. Labels body-lg Navy bold. Inputs 48px, Navy focus ring, Crimson error border. Two-column grid on desktop. Fixed footer: btn/secondary 'Back' left, btn/secondary 'Save Draft' + btn/primary 'Next' right, 'Step X of 10' center.

GPS capture — Step 9 (mobile)

Map placeholder full-width 240px height, Navy pin centered, Crimson accuracy dot. Accuracy label '±12m — Good' green. Two read-only fields: Latitude / Longitude in mono Navy. Lock icon right edge. btn/primary full-width 'Capture Location'. Loading state: spinner + 'Acquiring signal...'. Text link 'Enter manually' Crimson.

Photo upload — Step 8

Upload zone: dashed border, camera icon Navy, 'Take photo or upload' body-lg. States as Variants: empty / captured (shows preview thumbnail) / uploaded / error (Crimson border + message). Retake button on captured state. Works same on web and mobile, mobile uses device camera directly.

PRAPTI

SHRENIKA

Step indicator component (all 10 states) **[web + mobile]**

Step 6 — Disability + severity slider **[web + mobile]**

Consent screen **[web + mobile]**

Step 7 — Education details **[web + mobile]**

Step 1 — Personal info **[web + mobile]**

Step 8 — Photo upload (4 state Variants) **[web + mobile]**

Step 2 — NID / citizenship upload **[web + mobile]**

Step 9 — GPS capture + map preview **[web + mobile]**

PRAPTI	SHRENIKA
Step 3 — Family info [web + mobile]	Step 10 — Review & submit (all data summary) [web + mobile]
Step 4 — Employment details [web + mobile]	Submission success + reference number [web + mobile]
Step 5 — Household details [web + mobile]	Draft / offline save indicator [web + mobile]
Admin entry UI (ward officer view) [web]	Approval queue after submission [web]

⚠ Common Mistakes

- Step indicator = ONE component, 10 step Variants — not 10 separate indicators
- Review screen (Step 10) must link back to each step for editing
- GPS map preview must show even offline — static placeholder, not live tiles

✓	10-step registration — web (1440px) + mobile (390px) = 20 frames minimum
✓	Step indicator and photo upload as reusable components

DAY

5

Citizen Profile + Modules

Goal: Profile and module screens done. Backend starts API integration.

UI REFERENCE

Profile header

Navy bg 180px. Avatar 80px circle left. Name heading-lg white, NID mono white below. Status badges: Verified (green), Active (Navy), NID Issued. Buttons right: btn/secondary/white 'Edit Request', btn/danger 'Flag'. Mobile: avatar 60px, name + NID stacked, badges wrap to 2 rows.

Profile tabs

Tabs: Overview | Timeline | Benefits | Documents | Family. Active tab: 3px Crimson underline, Navy text bold. Inactive: gray. 48px tab height. Mobile: horizontal scroll tabs. Overview tab — left 60%: personal details table (Label | Value, alternating rows). Right 40%: 3 KPI cards (benefits, docs, last sync).

Approval diff panel	Inline panel on profile page (not a modal). Two columns side by side. Left: 'Current Data' — gray header. Right: 'Requested Change' — Crimson header. Changed fields highlighted Crimson on right side. Footer: btn/primary 'Approve' (Navy), btn/danger 'Reject' (Crimson), btn/secondary 'Escalate'. Mobile: Before and After stacked vertically.
ID card preview	Card at standard proportions (85.6mm × 54mm). Front: Navy header band with Nepal emblem + 'Digital Nepal'. Citizen photo left, name + NID + DOB right. Bottom: barcode strip. Back: QR code large center, government seal, issue/expiry dates. Card lifecycle status bar reuses the Day 4 step indicator component.

PRAPTI	SHRENIKA
Citizen profile header — avatar, badges, actions [web + mobile]	Family tree graph — nodes + relationship labels [web + mobile]
Profile tabs — Overview, Timeline, Benefits, Documents [web + mobile]	Add / link relative modal [web + mobile]
Overview tab — details table + KPI cards [web + mobile]	Employment module form [web + mobile]
Approval diff panel (inline) [web + mobile]	Foreign employment tracking screen [web + mobile]
Approve / reject / escalate modal [web + mobile]	ID card request flow + status tracker [web + mobile]
Benefits and Documents tabs [web + mobile]	ID card front + back preview with QR [web + mobile]
Audit history table [web]	Card lifecycle status bar [web + mobile]
	Disability module — caregiver + certificate [web + mobile]

⚠ Common Mistakes

- Approval diff panel is inline on the profile page — not a modal
- Family tree nodes must use Auto Layout, not fixed-size graphics
- ID card must keep correct card proportions — do not distort

✓	Full citizen profile page (web + mobile) — all tabs
✓	ID card front + back + request lifecycle
✓	Family tree, employment, disability module screens

DAY

6

GIS + Offline Sync + Grievance

Goal: GIS, sync, grievance done. DevOps and QA get screen specs.

UI REFERENCE**GIS map (web)**

Fullscreen dark map placeholder. Left sidebar 320px Navy — header 'Map Layers', toggle groups: Infrastructure / Population / Risk Zones / Coverage Gaps. Each toggle: label + on/off switch + color legend dot. Analytics strip bottom 180px white: 4 stat chips (Navy icon + heading-md number + body-sm label). Map controls top-right: zoom, fullscreen, layer toggle.

Heatmap + pins

Density gradient Navy (low) to Crimson (high). Infrastructure pins: custom icons per category. Click pin: popup showing name, type, citizen count, last updated. Risk zone overlays: flood/landslide/earthquake as colored polygons with legend. Mobile: map fills full screen, layer panel slides up as bottom sheet 300px.

Offline sync (mobile)

Sync queue list: each item shows name + type + status badge (queued/uploading/failed). Progress screen: large progress bar Navy fill, item count 'Uploading 4 of 12', cancel btn. Conflict screen: 'Your Data' (Navy header) vs 'Server Data' (Crimson header) side by side with changed fields highlighted. Resolve: 'Keep Mine' (Navy btn) or 'Use Server' (Crimson btn).

Grievance + QR

Complaint form: category dropdown, description textarea, file attachment (3 Variants: empty / attached / error). Submit btn/primary. Tracking timeline: horizontal steps — Submitted (green) → In Review → Escalated → Resolved. QR scanner: camera frame with animated Crimson corner brackets, 'Point at QR code' body-sm. Result: verified (green check icon + name + NID) or invalid (Crimson X icon).

PRAPTI**SHRENIKA**GIS fullscreen map + layer sidebar **[web]**Offline sync queue list **[web + mobile]**Mobile GIS — full screen + bottom sheet **[mobile]**Sync progress screen **[web + mobile]**Layer toggles + heatmap + risk overlays **[web + mobile]**Conflict resolution screen **[web + mobile]**Infrastructure pin popup **[web + mobile]**Grievance complaint form **[web + mobile]**

PRAPTI	SHRENIKA
Coverage gap analytics strip [web]	Grievance tracking timeline [web + mobile]
Map legend + date filter [web]	Admin resolution + escalation [web]
	QR scanner + result screen (verified/invalid) [mobile]

⚠ Common Mistakes

- GIS map = dark rectangle placeholder + layer panel — do not design actual map tiles
- Sync conflict: Navy = local data, Crimson = server data — label clearly
- QR animation is a static frame in design, animated only in prototype

✓	GIS dashboard web + compact mobile GIS
✓	Offline sync queue, progress, conflict resolution
✓	Grievance form + tracking + QR scanner

DAY

7

Prototypes + Handoff

Goal: Prototypes connected. Assets exported. Dev teams have everything.

UI REFERENCE

Error states	No internet: Crimson WiFi-off icon, heading-md 'No Connection', btn/primary 'Continue Offline'. Server error: Navy server-off icon, 'Retry' btn + 'Contact Support' Crimson link. GPS unavailable: Crimson location-off, 'Open Settings' btn. All error screens same layout pattern — icon, heading, body-sm explanation, action button.
Empty states	No data / empty list: gray document icon outline, heading-md gray 'No records found', btn/primary if action available. No sync items: gray sync icon, 'All caught up' heading. These must be designed for every major list screen.
Loading skeletons	Gray (#E0E0E0) shimmer blocks replacing content. KPI card skeleton: 3 gray blocks (icon + number + label). Table skeleton: 5 alternating row blocks. Profile skeleton: avatar

	circle + 3 text lines. Use same component structure as real screens — just replace content with gray blocks.
Web prototype flow	Connect: Login → Central Dashboard → Citizen Registration (Step 1) → Review Screen → Citizen Profile → GIS Map. Use Navigate transition. Hover states use Smart Animate. Side panel opens with slide-in. Modal overlays fade in.
Mobile prototype flow	Connect: Login → Mobile Dashboard → Registration (Step 1) → GPS Capture → Review → Submit Success → Offline Sync Queue → QR Scanner. Use Navigate for screen changes. Bottom nav links all 5 tabs correctly.

PRAPTI	SHRENIKA
Reports analytics dashboard [web + mobile]	Error states (no internet, server error, GPS) [web + mobile]
Policy action cards + alert center [web]	Empty states (no data, no sync items) [web + mobile]
Web prototype — full navigation connected [web]	Loading skeleton screens [web + mobile]
Responsive check 1440px + 768px [web]	Mobile prototype — full flow connected [mobile]
Component naming audit [web]	Responsive check all 390px screens [mobile]
CSS token export for Next.js Tailwind [web]	Flutter asset export PNG 2x + SVG [mobile]
Dev Mode annotations on key screens [web]	Dev Mode annotations mobile screens [mobile]
SVG icon export (all icons used) [web]	

⚠ Common Mistakes

- Every frame must be named — no 'Frame 23' or 'Copy of Login' in the final file
- All colors must reference Variables — check before sharing with devs
- Exports must be set: 2x PNG + SVG on every icon and illustration

✓	Clickable web prototype — Login to GIS full flow
✓	Clickable mobile prototype — Login to QR scan full flow

✓	Error, empty, and skeleton states for all major screens
✓	Named, annotated file — handoff-ready for Next.js and Flutter

3. Figma File Structure

Page	Name	Owner	Sprint Day
01	Design System — Tokens, Components	Both	Day 1
02	Web — Authentication	Prapti	Day 2
03	Web — Dashboards	Both	Day 3
04	Web — Registration Flow	Both	Day 4
05	Web — Citizen Profile + Approvals	Both	Day 5
06	Web — GIS & Maps	Prapti	Day 6
07	Web — Reports & Analytics	Prapti	Day 7
08	Web — Grievance System	Shrenika	Day 6
09	Mobile — Authentication	Both	Day 2
10	Mobile — Registration Flow	Both	Day 4
11	Mobile — Citizen Profile + Modules	Both	Day 5
12	Mobile — Offline Sync & GIS	Shrenika	Day 6
13	Mobile — ID Cards & QR	Shrenika	Day 5–6
14	Prototypes	Both	Day 7
15	Assets & Export	Both	Day 7

4. Dev Handoff Summary

Next.js Team	Flutter Team	Backend / DevOps
- Web prototype (pages 02–08, 14) - All frames 1440px + 768px - Tailwind color token export - Typography tokens - Component library Dev Mode	- Mobile prototype (pages 09–14) - All frames 390px - PNG 2x + SVG exports - Flutter ThemeData tokens - TextStyle typography constants	- API endpoint list from screens - User roles + permission matrix - Form field validation rules - State machine flows - Error state catalogue

- SVG icon set

- Error + empty states

- Screen-to-endpoint mapping

Digital Nepal Citizen Ecosystem

UI/UX Sprint Playbook — Prapti & Shrenika

Digital Nepal Framework 2.0 | DoNIDCR NID Act 2076

#003893 — Navy Blue

#DC143C — Crimson Red
